About UNOOSA and UN-SPIDER

- United Nations Committee on the Peaceful Uses of Outer Space (**COPUOS**)
- **Programme on Space Applications**
- Executive Secretariat – International Committee on Global Navigation Satellite Systems (**GNSS**)
- United Nations Platform for Space-based Information for Disaster Management and Emergency Response (**UN-SPIDER**)
- **UNISPACE+50**

UNISPACE+50 initiative

The UN-SPIDER programme contributes to Sendai Framework by ensuring effective use of space based information in all stages of disaster management.

The Hyogo Framework for Action (HFA) learning

- Progress made in disaster management but **much less in reducing risk**
- The space for addressing the **underlying causes of risk in development** under the HFA has not been filled
- Local progress drags behind
- **Risks have increased faster than they have been reduced** and the magnitude of risk is large

UNITED NATIONS
Office for Outer Space Affairs

How Sendai Framework addresses the learnings?

From managing disaster to managing risk

- **Outcome:** Substantial **reduction of disaster risk and losses** in lives, livelihoods and health and in the economic, physical, social, cultural and environmental assets of persons, businesses, communities and countries ...
- **Goal:** **Prevent** creation of new risk, **Reduce** existing risk and **Strengthen resilience**
- **Scope:**
 - Adds slow-onset, small-scale, biological and man-made hazards
 - Increases the scope of action in recovery, and reconstruction to Build Back Better

7 GLOBAL TARGETS

Reduce

**Mortality/
global population**

2020-2030 Average << 2005-2015 Average

**Affected people/
global population**

2020-2030 Average << 2005-2015 Average

**Economic loss/
global GDP**

2030 Ratio << 2015 Ratio

**Damage to critical infrastructure
& disruption of basic services**

2030 Values << 2015 Values

Increase

**Countries with national
& local DRR strategies**

2020 Value >> 2015 Value

**International
cooperation**

to developing countries

2030 Value >> 2015 Value

**Availability and access
to multi-hazard early warning
systems & disaster risk
information and assessments**

2030 Values >> 2015 Values

13 GUIDING PRINCIPLES

Responsibility for DRR

- States have primary responsibility
- Shared responsibility with stakeholders

Approach

- Regard for human rights
- DRR & development relationship
- Multi-hazard & inclusive
- Local expression of risks
- Post disaster action & resolve underlying risks
- Build back better

Engagement

- All of society
- All state institutions
- Local government empowerment

Partnerships

- International cooperation & global partnerships
- Support to developing countries

4 PRIORITIES FOR ACTION

Priority 1 Understanding disaster risk

Policies and practices for DRR should be based on an understanding of disaster risk in all its dimensions of vulnerability, capacity, exposure of persons and assets, hazard characteristics and the environment.

Priority 2 Strengthening disaster risk governance to manage disaster risk

Disaster risk governance at the national, regional and global levels is of great importance for an effective and efficient management of disaster risk.

Priority 3 Investing in disaster risk reduction for resilience

Public and private investment in DRR are essential to enhance the economic, social, health & cultural resilience of persons, communities, countries, their assets, as well as environment

Priority 4 Enhancing disaster preparedness for effective response, and to “Build Back Better” in recovery, rehabilitation and reconstruction

Strengthened disaster preparedness for response, recovery, rehabilitation and reconstruction are critical to build back better

National and local dimensions

Regional and global dimensions

UNITED NATIONS
Office for Outer Space Affairs

It is critical to understand risks to protect hard-earned development gains

Understanding disaster risk - **National level** (relevant to Earth observation)

Promote the collection, analysis, management and use of relevant data and practical information.

Encourage the use of and **strengthening of baseline and periodically assess disaster risks**

Develop, update periodically and disseminate, as appropriate, **location-based disaster risk information, including risk maps to decision makers**, the general public and communities at risk to disaster in an appropriate format by using, as applicable, geospatial information technology

Promote **real-time access to reliable data**, make use of space and in situ information, including **geographic information systems (GIS)**, and use information and communications technology innovations

Build the knowledge of government officials at all levels, civil society, communities and volunteers, as well as the private sector, through sharing experiences, lessons learned, good practices and training and education on disaster risk reduction,

Understanding disaster risk – **Global level** (relevant to Earth observation)

Enhance the development and dissemination of **science-based methodologies and tools** to record and share disaster losses and relevant disaggregated data and statistics, as well as to **strengthen disaster risk modelling, assessment, mapping, monitoring and multi-hazard early warning systems**

Promote common efforts in partnership with the scientific and technological community, academia and the private sector to **establish, disseminate and share good practices internationally**

Enhance the scientific and technical work on disaster risk reduction and its mobilization through the coordination of existing networks and scientific research institutions at all levels and all regions with the support of the UNISDR Scientific and Technical Advisory Group

'Space' has a lot to contribute to Sendai Framework

- ACE
- TRACE
- SOHO
- Wind
- RHESSI
- Geotail
- Voyager 1 & 2
- Cluster
- TIMED
- Jason-1
- QuikSCAT
- ERBS
- ACRIMSAT
- Landsat 7
- NMP/E0-1
- Ulysses
- IMAGE
- TOREX/Poseidon
- TRMM
- Polar
- FAST
- Aqua
- SAGE III/METEOR-3M
- Terra
- UARS
- GRACE
- EP-TOMS
- Aura
- SORCE
- ICESat

Earth observation to understand disaster risks

Such datasets are needed for planning ecosystem based disaster risk reduction (EcoDRR) measures

UNITED NATIONS
Office for Outer Space Affairs

**United Nations International Conference on Space-based
Technologies for Disaster Management –
“A consolidating role in the implementation of the Sendai
Framework on Disaster Risk Reduction: 2015-2030”
14-16 September 2015, Beijing, China**

Outcomes from UN-SPIDER Conference 2015 on Priority 1 – Understanding the risk

- Build and enhance the **capacity for using Earth observation (EO)** data at all levels;
- promote a culture of **continuous risk assessment using EO** at the national and local levels;
- promote a culture of **sharing non-sensitive data** at all levels;
- **raise awareness among politicians** of the usefulness of Earth observation data in disaster risk reduction;
- enhance the **political will** of Governments at the highest level **to carry out risk assessments and promote the effective use of Earth observation data**;
- Government agencies should **include Earth observation technology in their disaster management strategies**, plans and policies, as those are further transformed into implementable actions.

The conference report is provided to the participants

How UN-SPIDER contributes to Sendai Framework?

National Level

UN-SPIDER Technical Advisory Support addresses policy and coordinational level issues at all levels

- **Over 55 countries supported**
- **34 national Technical Advisory Missions (end 2016)**
- **Over 350 recommendations**
- **Support to implement key recommendations**

UN-SPIDER Technical Advisory Missions and further follow up activities incorporates all relevant elements of Sendai Framework

- **Building capabilities**
- **Strengthening national and regional institutions**
- **Promoting international cooperation**
- **Updating policies and coordination**
- **Raising awareness**
- **Improving information and data management practices**

Myanmar

- 2012 – UN-SPIDER Technical Advisory Mission
- Key recommendation: Establishment of "Hazard Response and Operations Centre"
- Follow up programmes in 2012 & 2016
- Impact:
 - Emergency Operation Centre (EOC) established with "Remote Sensing Unit";
 - Trained personnel in remote sensing/GIS are available at EOC;
 - Disaster Management Training Centre conducts courses in remote sensing/GIS
 - NSDI and one map policy under consideration

Sri Lanka

- 2011 – UN-SPIDER **Technical Advisory Mission** strongly recommended **NSDI**
- 2012 & 2014 – Follow up and capacity building activities
- 2013 – **Sri Lanka Spatial Data Infrastructure (SL SDI)** approved by the Cabinet of Ministers
- 2014 – SL SDI Road map prepared
- NSDI components – Data, Data supply, Data Access & Applications, Governance, Legal and Policy

UN-SPIDER Technical Advisory Mission, Sri Lanka

17 – 21 October 2011

Vietnam

- 2013 – UN-SPIDER offered Technical Advisory Mission
- 2014 – Follow up (Geospatially Enabling Communities Collaboration)
- 2015
 - Establishment of Geoinformatics Division at Disaster Management Centre
 - MoU with national and international satellite image providers
- 2016
 - SOP for use of earth observation images during emergency response
 - Data design framework

Disaster Management Centre is used satellite images For Drought Monitoring and other emergencies

UNITED NATIONS
Office for Outer Space Affairs

How UN-SPIDER contributes to Sendai Framework?

Global/Regional Level

UNITED NATIONS
Office for Outer Space Affairs

UN-SPIDER @ AMCDRR

**Asian Ministerial Conference on Disaster Risk
Reduction (AMCDRR), New Delhi, India, 2-5 November
2016**

*Thematic Session: Earth observation and
geospatial information to support
implementation of Sendai Framework*

Procedural Guidelines for utilization of Earth observation during emergencies – ASEAN efforts

- 1st Workshop: 15-16 April, Yogyakarta, Indonesia
- 2nd Workshop: 4-5 June 2015, Hangzhou, China
- 3rd Workshop/expert meeting: December 2015, Sriracha, Thailand
- **4th Workshop: April 2016, Bogor, Indonesia**

Outcomes

- *Procedural Guidelines for ASEAN countries to access Earth observation information during emergency response*
- *Promoting universal access to International Charter*

UNITED NATIONS
Office for Outer Space Affairs

EMERGENCY MAPPING GUIDELINES

Working Paper

Draft Version 1.0 - March 2014

International Working Group on Satellite-based Emergency Mapping (IWG-SEM)

International Working Group on Satellite based Emergency Mapping (IWG-SEM)

www.un-spider.org

UNITED NATIONS
Office for Outer Space Affairs

Publications

Links and resources

- Data sources
- GIS and remote sensing software
- Training opportunities
- Institutions

www.un-spider.org

Training material

- Flood risk assessment
- Drought risk assessment
- Earthquake damage assessment
- Flood damage and loss assessment
- Drought risk assessment
- Emergency response mapping etc.

Recommended Practices

- Flood Mapping
- Flood Hazard Mapping
- Drought monitoring using the Vegetation Condition Index (VCI)

UNITED NATIONS
Office for Outer Space Affairs

How to engage with UN-SPIDER

Next 5 years priority

- **Engage with UNISPACE+50 initiative of UNOOSA** that contributes to three global frameworks: SDGs, Sendai Framework and Climate Change Agreement
- **Plan national, regional and international activities** to promote use of Earth observation in risk mapping, early warning, preparing for emergencies etc.
- **Seek UN-SPIDER Technical Advisory Mission** to get support at national level
- **Develop joint follow up actions** after the Technical Advisory Mission
- **Develop projects with UN-SPIDER** to achieve specific actions recommended during the Technical Advisory Mission
- **Support Global Partnership on Earth Observation** to promote space in implementation of Sendai Framework
